DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 5, 6, 10-16, 18-23, 26, 27, and 29-31 are allowed.

Reasons For Allowance

2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to suggest or disclose all the elements of claims 1, 13, and 22, in particular a processor connected to said satellite TV receiver for determining a component malfunction condition with said satellite TV receiver in combination with other elements recited in claims 1, 13, and 22.

Arguments filed by the applicant on 10 September 2009 were found to be persuasive. The Galipeau reference, which was relied upon by the examiner failed to fully disclose a processor for determining a component malfunction condition.

Galipeau disclosed a workstation 200 at headend 178 (see figure 9A) comprising an application for identifying faulty components of the system for repair or replacement (Col. 11, lines 35-50). However, Galipeau further disclosed several of the modules of the system, such as video module 152, transmitted BITE status information to the headend 178 via the data network interface module 114 to enable identification of defective modules (Col. 9, lines 38-41). Galipeau fails to further expand upon how workstation 200 identified faulty components such that it appears the workstation 200 collects the BITE status information and does not actually determine component

malfunction conditions within modules of the system. Furthermore, Galipeau fails to specifically mention workstation 200 identifies a faulty component within video reproducer unit 194 or "satellite TV receiver".

As for the Sklar reference, Sklar discloses a processor (44 - figure 2) connected to said satellite TV receiver (42 - figure 2) for determining a signal strength condition within said satellite TV receiver [42] (i.e., determine that the aircraft is about to leave the coverage area) (Col. 9, line 61 to Col. 10, line 8), and generating responsive thereto a substitute image on said plurality of passenger video displays prior to display of an undesired image which would otherwise be produced (i.e., region control unit 44 instructs receiver unit 42 to switch to a different program) (Col. 10, lines 32-47 and Col. 11, lines 9-33). Sklar fails to disclose processor 44 is capable of determining a component malfunction within said satellite TV receiver 42, the component malfunction being independent of a strength of a signal received at the satellite receiver.

Thus, the prior art fails to suggest or disclose a processor connected to said satellite TV receiver for determining a component malfunction condition with said satellite TV receiver in combination with other elements recited in claims 1, 13, and 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
